The flexibility of a custom solution.

The reliability & cost of a packaged product.

- ⇒ Rich, full function Graphical User Interface.
- ⇒ Multi-user, multi-location.
- ⇒ Scale from tens to thousands of users *with no per user costs*.
- ⇒ Advanced image rendering, display and OCR extraction.
- ⇒ Common code base for both “rich client” and web access.
- ⇒ Database product independent. Run using Oracle, Informix, Sybase, MSSQL, Open Source RDBMS or other JDBC-compliant product as dictated by your current environment.
- ⇒ Open Standards approach to client access, image storage, scanner interfaces and web deployment.

The power of Java™ Technology.

The value of Open Source.

The result of over 12 years of experience developing applications for some of the most challenging transportation operations in the industry.

**B**enefit from applications that do more than just provide a screen on which to enter data but are designed to interface with your operations at the exact points where that data originates or is needed most.

**D**eploy a system that fits to the needs of your operation rather than one that demands you change to fit with its capabilities.

**U**se a solution that understands that quality of service and ability to respond to the needs of your customers is the best way to develop a relationship based on more than just cents per mile.

**W**ork with an organization that not only knows technology but also how to apply it to the complex operating processes of transportation.
